Poster session A

								Page
Monday morning session	A01	Duschl	Claus	Fraunhofer Institut Potsdam	DE	Novel Thermoresponsive Polymer Coatings for Controlling Cell Behaviour	1	11
	A02	Choi	Seungyul	Seoul National University	KR	Biomolecule detection using electrowetting	3	43
	A03	Hegde	Vikas	University of Dundee	UK	Computationally assisted design and experimental validation of a novel 'flow-focussed' microfluidics chip for generating monodisperse microbubbles	5	39
	A04	Frimat	Jean-Philippe	BIOS/Lap on Chip, University of Twente	NL	A microfluidic platform mimicking atherosclerosis	7	38
	A05	Rushworth	Cathy M.	University of Southampton	UK	High sensitivity microfluidic analysis using cavity-enhanced absorption spectroscopies	9	85
	A06	Svokodova	Zuzanna	University of Pardubice	CZ	Magnetic poly(glycidyl methacrylate) particles with various coatings for on-chip immunocapture of rare cells for diagnosis of cancer relapse	11	59
	A07	Schönbächler	Andrea	University of Applied Sciences and Art Muttenz	CH	Transport of nanoparticles after release from a biodegradable implant	13	82
	A08	Raillon	Camille	EPFL Lausanne	CH	Fitting Algorithm for Nanopore Signals: Software and Applications	15	51
	A09	Shah	Abdul	Fraunhofer IBMT	DE	Microchip-based lensless imaging system for real time cell characterization on chip level	17	40
	A10	Wang	Chao	University of Oxford	UK	Microfluidics in curved channels for particle separation	19	69
	A11	Mayer	Pascal	BioFilm Control	FR	Nano-probing adsorbed bio-layers using magnetic micro/nano-bead displacement visualisation	21	41
	A12	Cappelli	Stefano	Univerisity of Eindhoven	NL	Magneto-capillary valve for integrated purification and enrichment of nucleic acids and proteins	23	42
Monday afternoon session	A13	Choi	Junkyu	Seoul National University	KR	Molecular reaction induced deflection of thin membrane transduction: Experiment and theory	25	46
	A14	Bianchi	Elena	EPFL Lausanne	IT	Detecting Cells Flowing through Interdigitated 3D Micorelectrodes	27	72
	A15	Andrews	Russell J.	NASA Ames Research Center	US	Nanotechniques for Neuro-Oncology	29	22
	A16	Kilchenmann	Samuel	EPFL Lausanne	CH	Increased linearity of rotating electric fields for electrorotation applications through the use of 3D microfabricated electrodes	31	74
	A17	de Wagenaar	Björn	MESA+, University of Twente	NL	Label-free cell cycle analysis by microfluidic capacitance sensing	33	44
	A18	Dinh	Ngoc-Duy	ISAS Dortmund	DE	Microfluidic Construction of Precisely Defined Brain Models	35	84
	A19	Mehn	Dóra	Fondazione Don Carlo Gnocchi	IT	Gold nanostars in development of a SERS based method for minimal residual disease monitoring	37	30
	A20	Mottet	Guillaume	Centre de Recherche Paris	FR	3D chip for low cost cell analysis	39	45
	A21	Lee	Ada Y.	Ulsan National Institute of Science and Technology	KR	Rapid and efficient circulating tumor cell isolation using size-based filtration on a portable centrifugal microfluidic device	41	77
	A22	Spencer	Daniel	University of Southampton	UK	Identification of tumour cells using microfluidic impedance cytometry	43	56
	A23	Jacot-Descombes	Loic	EPFL Lausanne	CH	Collagen and Hep G2 cell-laden micro beads fabricated by inkjet printing	45	63
	A24	Rinklin	Philipp	Forschungszentrum Jülich GmbH	DE	3-dimensional electromagnetic on-chip actuation of magnetic beads	47	49
	A25	Choi	Jungil	Seoul National University	KR	A Rapid Antibiotic Susceptibility Test (RAST) system providing innovative solutions to antibiotic resistance and sepsis problems	49	47
